

# Fiberweb Floating Row Covers

## fiberweb

### AGRICULTURE

TerraLink is the western Canadian distributor for Fiberweb, a leading producer of specialist technical fabrics for use in agriculture, horticulture and industry. Made of non-woven polypropylene, floating row covers have been commonly used to extend the growing season of high value crops and increase yield and quality.

- Bring on harvest earlier
- Extend harvest at the end of the growing season
- Insect exclusion in organic production

#### Two Brands to Choose From:

#### **AGRYL**

The original product is Agryl P17, the benchmark crop cover product for the Fraser Valley. It has a weight of 17 grams per square meter and has one of the highest tensile fibre strengths on the market. For over 30 years Agryl has been the quality brand of choice.

Sizes Available: 2.2 x 250 m  
4.1 x 250 m

#### **NOVAGRYL**

Manufactured in 3 combined layers of polypropylene filaments, Novagryl is a stronger product at 19 grams per square meter. It has 70% more stretch than normal fleeces, which reduces interference with crop foliage – ideal for quick-growing plants. Rolls over 10 m wide include reinforced edges.

Sizes Available: 6.6 x 250 m  
10.5 x 250 m  
12.8 x 250 m  
16 x 250 m  
20.4 x 250 m

#### **AGRYL P50 Black**

Not used as a floating row cover but as a mulch, Agryl P50 Black has the advantage over regular black plastic sheeting because irrigation or rain can pass through, including sprayed or dripped fertilizer solution. Available to be ordered with or without perforations.

Sizes Available: 1.6 m x 250 m
