

Horse Lawn Forage Mix

- Coastal or Interior
- Well adapted to most conditions

For: • *A lawn that is safe for grazing animals.*

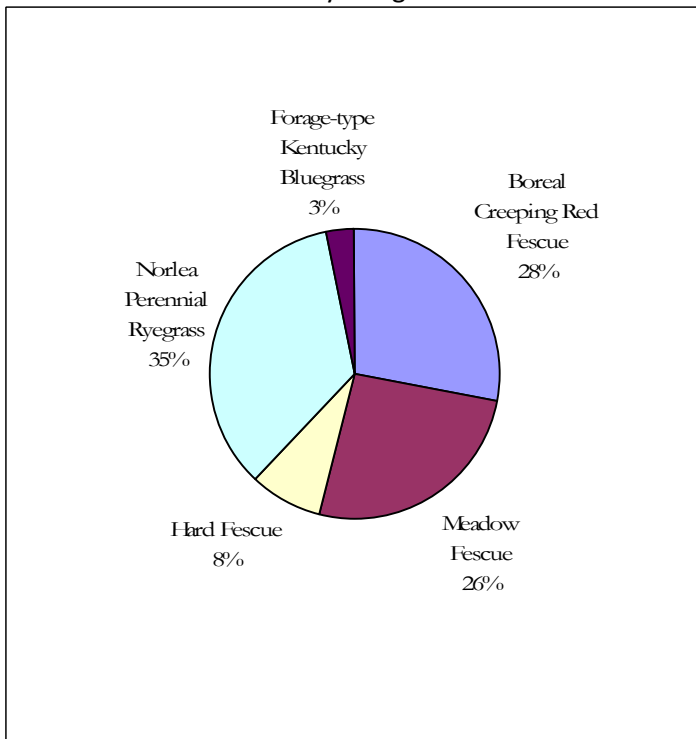

Horse Lawn Forage Seed Mixture is specially formulated for the Coastal and Interior areas for lawns that are safe for animals to graze. Sometimes it is desirable to allow the animals to graze on residential lawns, however, often conventional lawn seed contains endophyte-enhanced grasses, which may make animals sick when consumed. The **Horse Lawn** seed mix makes safe grazing on lawns possible. Since the types of grasses used are forage-type and not bred for turf, the lawn will not have the fine-textured look of a typical well-maintained lawn, but if seeded at the recommended rate and fertilized and mown as needed, it provides satisfactory turf. It also provides some feed value and tolerates close grazing.

This mixture comes in 22.7 kilogram bags and should be seeded at 200-250 pounds per acre, depending on seeding conditions and desired growth density.

***Richardson Seed forage mixtures do not contain endophyte-enhanced grasses.**
