

New Wetting Agents registered in Canada

When you want to hydrate use PBS¹⁵⁰, when you want to correct apply OARS.

PBS¹⁵⁰: Long-Term Surfactant from Aqua-Aid

A unique new technology for use on turf grass to address the issues of performance loss. Increasing water availability promotes improved turfgrass quality, color, uniformity as well as improved heat and water stress tolerance.

Use will encourage better water movement into and throughout the soil as well as improved soil hydration and rehydration which also makes water more available in the soil the turf. Will lessen hydrophobic conditions by encouraging better wetting of soil particles.

Rates:

130 ml in 8 L per 100 m². For best results, we recommend once every 30 days. PBS¹⁵⁰ is to be irrigated into the soil following each application.

OARS: The Corrective Approach from Aqua-Aid

Application of OARS improves the movement of water into and throughout soil while reducing water repellency and localized dry spot conditions in turfgrass. OARS removes the build-up of organic acids that coat the surface of sand particles and cause water repellency. Recommended application is once every 30 days. 27% reduction of organic substances with only 2 applications. Perfect for turf areas that repel water every year.

Rates:

130 ml in 8 L per 100 m². For best results, we recommend once every 30 days. OARS is to be irrigated into the soil following each application.
